

WHAT IF YOUR CHILD STOPPED BREATHING?

Expectant parents, new parents, grandparents and siblings have a simple, convenient way to learn to perform infant CPR and to relieve choking — the American Heart Association’s Family & Friends Infant CPR training at Health First. This class is designed for people who don’t require a course completion card to satisfy a work requirement but still want to learn important life saving skills.

2012 Classes

“Because the home is the most likely place for an infant to choke or suffer cardiac arrest, parents and caretakers are among the most important people to be trained in infant CPR and the relief of choking,” said Monica Kleinman, MD, national spokesperson for the American Heart Association and clinical director, Medical/Surgical Intensive Care Unit, Children’s Hospital Boston.

All classes held on Saturdays from 9:00 am – 11:00 am. Please check the class you will be attending:

- January 21 February 25 March 17 April 21 May 19
- June 16 July 21 August 18 September 15 October 20
- November 17 December 15
